Beer Exposed to Light for 5 Minutes Becomes Undrinkable... This is not our statement, but the deliberate opinion of one of the most renowned scientists in the world. Read the entire statement: "We have tested beers repeatedly, placing the bottles in the direct sunlight, and testing the same after exposure, found that the beer with three and five minutes exposure became undrinkable on account of the peculiar odor developed. The detrimental effect of light upon beer can be successfully counteracted by the employment of brown or dark colored glass bottles, and such bottles are, therefore, recommended." —Wahl-Heim Institute of Fermentology.
